

# Queensland Ride On Mower Racing Association

## Suggested Guidelines for Demo Racing Events

The main aim of doing demo events is to make it as entertaining as possible for the spectators. Mower Racing is spectacular and very fast and on some tracks, we can reach speeds of up to 85kph.

If you are using an existing speedway track or similar, we have included some suggested layouts below. The straight should be between 80 to 100 metres in length, then flowing into the infield which should consist mainly of fast flowing bends with maybe one or two tight sections. Overall, the track length should be 350 to 400 metres in total.

As Racing Mowers DO NOT have any suspension at all, they can be back and kidney killers. For the safety of the racers, we ask that you please ensure the track is as smooth as possible with no potholes or bumpy sections.

The perfect track for these machines is a granite / crusher dust or similar that is as flat and smooth as possible. To keep dust down, we suggest it is watered down to make it enjoyable for all concerned.

As people don't stay at events or shows for the whole day, it is suggested that you have 3 or 4 half hour racing sessions during the day, mid morning, lunch time and mid afternoon. That way all your visitors will get a chance to see the racing mowers in action.

If an existing stadium / track is not available, a purpose built track can be done to the same guidelines.

Please contact us if you need any more info or want to discuss the event.
